

A fellowship is available in the
San Raffaele Rett Research Center,
which is coordinated by
PROF.SSA NICOLETTA LANDSBERGER.

The research of the laboratory is aimed at characterizing the role of MeCP2 and CDKL5, the two major causes of the X-linked neurodevelopmental disorder Rett Syndrome, for nervous system functions.

The **San Raffaele Rett Research Center**, is located at the San Raffaele Scientific Institute, Milan, Italy, and is part of the highly competitive and stimulating scientific Division of Neuroscience.

Applicants should hold a university degree (laurea magistrale/masters) in Biological Sciences (or similar) and have a minimum of 2 years experience post-laurea in molecular and cellular biology and, if possible, in neurobiology. We are looking for a highly motivated person that is capable of working independently.

Please send your CV with letters of recommendation to

Nicoletta Landsberger
