

Fondazione Centro S. Raffaele del Monte Tabor
Division of Regenerative Medicine

Davide Gabellini, PhD
Assistant Telethon Scientist
Fondazione Telethon

TECHNICIAN POSITION AVAILABLE

A technician position is available in the Laboratory of Gene Expression and Muscular Dystrophy, Division of Regenerative Medicine, DIBIT-hSR, Milano, Italy.

The general focus of the group centers on the definition of the molecular pathogenesis of facioscapulohumeral muscular dystrophy (FSHD). Current projects include analysis of epigenetic mechanisms regulating FSHD critical region gene expression and functional studies on the FSHD mouse model.

The laboratory is strategically located within the scientific environment of the San Raffaele Biomedical Area. There are ample opportunities to interact with other laboratories with interests in regulation of gene expression and disease. The Division of Regenerative Medicine has a strong emphasis on development of novel therapeutic approaches for muscular dystrophy.

Candidates with experience in animal handling, histology and molecular biology are encouraged to apply. Applicants should have good inter-personal and communication skills.

Interested candidates should send enquiries, curriculum vitae, containing information about education and experience and a list of at least one individual that can serve as reference by e-mail to:
