Current Research Interests and expertise

1. Mechanisms involved in STAT3 oncogenic activities, particularly in: i) the relationships between breast tumor cells and cancer associated fibroblasts (Raggi et al., in prep.); ii) shaping energy metabolism and Ca homeostasis (Avalle et al., CDD 2018); iii) regulating ES cells pluripotency via linc RNAs (Monteleone et al., MS in preparation); iv) dissecting the role of STAT3 and complement in auto-immune myocarditis (Avalle, Marino et al, MS in preparation). Additionally, we have recently engaged in a collaboration with Nouscom srl, to improve the effectiveness of personalized cancer vaccines (D'Alise et al., Nat Commun. 2019)
